

ASSESSMENT RUBRIC · YEAR 9–10

FOR TEACHER USE ONLY

ASSESSMENT RUBRIC

Advanced Water Safety | Year 9–10 | Victorian Curriculum F–10 Version 2.0

7 criteria · E to A grade descriptors · Student self-assessment column
Print A4 landscape · Distribute to students at the start of the unit

Student Name	Class	Teacher	Assessment Option (A / B / C — circle)	Due Date
--------------	-------	---------	--	----------

How to use this rubric

Read each criterion carefully. Complete the Student Self-Assessment column BEFORE submitting — circle the grade descriptor that best matches your work. Your teacher will independently complete their assessment. Circled grades are a great starting point for feedback conversations.

A — Extended understanding

Criterion & Curriculum Code						
1. Data Analysis & Calculation VCHPEP144	Cannot perform basic calculations; misinterprets or ignores data.	Attempts calculations with errors; simple description without interpretation.	Correctly calculates at least one rate; reasonable interpretation linking figures to context.	Accurate calculations with working shown; interprets significance; compares contexts; identifies trends.	Sophisticated calculations; nuanced interpretation; identifies implications and limitations; connects to other content.	E ■ D ■ C ■ B ■ A ■
2. Physiological Knowledge VCHPEP144 · VCHPEM162	Cannot describe drowning physiology; vocabulary absent or incorrect.	Names some processes but cannot explain mechanisms behind them.	Describes drowning sequence in correct order; uses most required vocabulary correctly.	Explains mechanisms precisely; connects physiology to CPR rationale and survival outcomes.	Sophisticated accurate analysis; all specified terms correct in context; explains 4-min window and secondary drowning.	E ■ D ■ C ■ B ■ A ■
3. Social Determinants VCHPEP143	Identifies individuals as solely responsible; no systemic analysis; may rely on stereotypes.	Acknowledges social factors exist; superficial analysis of how they work.	Identifies key determinants; explains how they increase risk with reference to Victorian data.	Analyses multiple determinants with evidence; distinguishes structural from individual causes; proposes targeted strategies.	Sophisticated structural analysis; clearly distinguishes individual vs systemic; evidence-based equitable interventions; acknowledges intersectionality.	E ■ D ■ C ■ B ■ A ■
4. Prevention Evaluation VCHPEP147 · VCHPEP148	Cannot distinguish stronger from weaker evidence; describes without evaluating.	Names strategies; evaluates superficially without evidence or criteria.	Evaluates at least two strategies with reference to evidence; identifies at least one limitation.	Comparative evaluation using evidence hierarchy; justifies resource allocation; references specific sources.	Critical nuanced evaluation; acknowledges trade-offs and context-dependence; sophisticated prioritisation with primary source citations.	E ■ D ■ C ■ B ■ A ■
5. International Comparison VCHPEP148	No research evident; cannot identify any international approaches.	Names one international organisation; mostly descriptive, superficial account.	Compares at least two international approaches against Victorian practice; identifies one substantive difference.	Identifies substantive differences and similarities; evaluates relevance to Victorian context with specific reasoning.	Critical evidence-based comparison drawing on primary sources; argues for/against adoption in Victoria; acknowledges contextual factors.	E ■ D ■ C ■ B ■ A ■

Criterion & Curriculum Code						
6. Communication Product VCHPEP147	Incomplete; no clear audience, evidence, or call to action.	Basic message; vague audience; one loosely cited fact; generic call to action.	Clear message; appropriate audience; at least one data-backed claim with source URL; specific call to action.	Compelling; evidence-based throughout; language tailored to named audience; measurable and realistic outcomes.	Sophisticated persuasive evidence-rich product; addresses barriers for target group; measurable outcomes; primary citations throughout.	E ■ D ■ C ■ B ■ A ■
7. Diving & Spinal Injury Analysis VCHPEP143 · VCHPEP144	Cannot explain the mechanism of diving spinal injury; confuses swimming ability with injury prevention.	Identifies that diving can cause spinal injury; cites one statistic; limited explanation of the physiological mechanism.	Explains cervical spine mechanism accurately; cites at least two AIHW/RLSSA statistics; identifies common factor across case studies.	Accurate physiological explanation; statistics cited with sources; case studies analysed with specific mechanism identified in each; begins structural account of 95% male statistic.	Sophisticated analysis; structural explanation for 95% male statistic using social determinants; inland waterway compound risk explained; evaluates "Feet First" message against evidence; proposes complementary strategy for named high-risk group with SMART metric.	E ■ D ■ C ■ B ■ A ■
Student overall grade	Student — one thing I am most proud of: E ■ D ■ C ■ B ■ A ■		Teacher — strengths:		Teacher — areas for development:	Teacher grade & signature: E D C B A
